BLASCHKE PRODUCTS AND NEVANLINNA–PICK INTERPOLATION

Arne Stray

Abstract: For a Nevanlinna–Pick problem with more than one solution, Rolf Nevanlinna proved that all extremal solutions are inner functions. If the interpolation points are contained in finitely many cones terminating at the unit circle, it is shown that all extremal solutions are Blaschke products.

2010 Mathematics Subject Classification: 30E05; Secondary: 30J10.

Key words: Blaschke product, minimal interpolation, logarithmic capacity.
