Uniformly strongly elliptic boundary value problems

Let $K \ge 1$, $\Omega \subset \mathbb{C}$ bounded domain. We say $\gamma \in \mathcal{G}(K, \Omega)$ when

- Compactly supported: $\operatorname{supp}(\gamma 1) \subset \overline{\Omega}$.
- Strongly elliptic: $\|\gamma\|_{\infty} \leq K$, $\|\gamma^{-1}\|_{\infty} \leq K$.
- Isotropic conductivity: $\gamma : \mathbb{C} \to \mathbb{R}_+$.

Lemma

Let ϕ be K-qc, and let $\mu \in L_c^{\infty}$. Consider $0 and <math>\frac{1}{q} > \frac{K}{p}$. For t small enough

 $\omega_{q}(\mu \circ \phi)(t) \leqslant C_{K,q,p} \, \omega_{p} \mu(C_{K} t^{\frac{1}{K}}).$

Theorem

Let $\mu \in L^{\infty}_{c}$ with $\|\mu\|_{L^{\infty}} \leq \kappa < 1$ and support in \mathbb{D} . Let f be a quasiregular solution to

$$\overline{\partial}f = \mu \,\overline{\partial}f.$$

Let $1 satisfy that <math>\kappa \|\mathcal{B}\|_{L^{p} \to L^{p}} < 1$, let $r \in [p, p_{\kappa})$ and let q be defined by $\frac{1}{p} = \frac{1}{q} + \frac{1}{r}$. Then, we have that

$$\omega_{\rho}(\bar{\partial}f)(t) \lesssim_{\kappa,r,\rho} \|f\|_{L^{r}(2\mathbb{D})} \omega_{q}\mu(t) + \|f\|_{W^{1+\rho}(2\mathbb{D})} |t|^{1-\frac{2}{\rho}}$$
