1 Introduction

Let P and Q be real homogeneous polynomials in the variables x and y of degrees m and n , respectively. Then we say that $X = (P, Q) : \mathbb{R}^2 \rightarrow \mathbb{R}^2$ is a *semi-homogeneous polynomial vector field*. In particular if $m = n$, X is a *homogeneous polynomial vector field*.

The case $m = n$ has been studied by several authors. The homogeneous quadratic polynomial vector fields ($m = n = 2$) by Lyagina [17], Markus [18], Korol [14], Sibirskii and Vulpe [21], Newton [20], Date [10] and Vdovina [22]; the homogeneous
